**Ph.D. Student Evaluation – Solongo Ganbold, M.Sc.**

Solongo Ganbold, M.Sc. started her Ph.D. studies under my supervision in November 2006. The topic of her research work deals with development of advanced packaging materials based on water-soluble polymers. The crucial attention is paid to microencapsulation technology, which has wide applicability in food and pharmaceutical industry as well as in biotechnology.

She has presented the results of her work at several international scientific conferences such as Modest 2008 (Liege, Belgium) or ISPAC 2009 (Zlín, Czech Republic). In addition, the results presented in her Ph.D. thesis are supposed to be submitted for publication in impacted journals within next several months.

On the basis of my personal experience and consultant's opinion, it can be assumed that Solongo Ganbold, M.Sc. has proven sufficient knowledge and diligence, which are necessary for a successful fulfilment of the Ph.D. degree programme "Food Chemistry and Technology". Thus, it is pleasure for me to fully recommend her for the defence of her Ph.D. thesis.

A handwritten signature in black ink, appearing to read "Petr Saha", with a long horizontal flourish extending to the right.

Prof. Ing. Petr Saha, CSc.

Supervisor
