

## Ph.D. Student Evaluation – Jorge Lopez, M.Sc.

Jorge Lopez, M.Sc. began his Ph.D. studies at the Polymer Centre under my supervision in 12/2007. The topic of his research work deals with surface modification of polymers to enhance biological activity intended for medical applications. The thesis itself contains a background along with three papers directly connected with the subject.

During his doctoral studies, Mr. Jorge Lopez showed a broad knowledge on the topic and related areas and has proved the ability to work purposively and independently. His results were included in the Research Plan at the Polymer Centre and in 2011 he joined the Centre of Polymer Systems as Junior Researcher.

On the basis of my personal experience and consultant's opinion, it can be assumed that Jorge Lopez, M.Sc. has proved sufficient knowledge and diligence necessary for a successful fulfillment of the "Chemistry and Materials Technology" Ph.D. programme.

Thus, it is my pleasure to fully recommend Jorge Lopez for the defense of his Ph.D. thesis.
